Windows Phone 7 "Codename Pink" Unveiled

A sneak peek at the current Kin One and Two prototype designs. Photo: Microsoft 2009

Kin is Microsoft's third concurrently-supported mobile platform after Windows Phone 7 and Windows Mobile 6.5.3, a result of collaborating with the former developers at Danger, whose Sidekick-centric company was picked up by Microsoft in 2008. It's running an entirely new, touchscreen-centric operating system with a self-proclaimed social media slant. There are three main panes: a list of apps on the left, a list of favorites on the right, and a Motoblur-esque page of updates in the middle, dubbed "The Loop" and prioritized by your favorite people and RSS feeds. The browser is custom -- we're told it's based on the Zune's, but it's nothing to write home about. Speaking of which, there's also full support for Zune music and video, but at this point, no games. Mac users can also take solace in knowing there'll be sideloading software for adding non-DRM'd music to the phone.

A sneak peek at the current Kin One and Two prototype designs. Photo: Microsoft 2009

There are two devices for launch, aptly titled Kin One and Kin Two. Both are sliders with full QWERTY support, with the former leaning towards more one-handed use and other with a decidedly larger keyboard. Both are coming to Verizon Wireless in May and Vodafone in the Fall. Prices and data plan fees have yet to be disclosed.

HISTORY

When we first caught wind of Microsoft Kin is largely a matter of perspective. Arguably the fun began in February 2008 when Microsoft bought Danger and placed the Sidekick makers into its own division dubbed the Premium Mobile Experiences (PMX), but looking farther back, rumors of a "Zune phone" go as far back as the Zune itself in 2006 (it was repeatedly denied, of course).

As far as we can tell, the first public reference to Project Pink -- the codename for what would become Kin -- would be just after the acquisition was finalized in May 2008 from Mary Jo Foley and her infamous well-placed sources, then called a "set of consumer-focused 'premium mobile services.'" A Tegra processor was added to the rumor by November and the idea of "an entire software and service platform" with Zune support just a month later. A Mobile World Congress debut (February 2009) was pegged as a possibility, and obviously that didn't happen.

The Kin is likely to include Microsoft's new Windows Marketplace.

-Bill Gates, from his home

Cut to April 2009, where after a brief absence, Project Pink pops up in the Wall Street Journal. In retrospect, the details weren't quite right -- while the folks in Redmond did end up going with Verizon Wireless as its carrier of choice for Kin (here inferred as only one device), and hardware was designed in-house and manufactured by a third party, that part about it being "likely [to] include Microsoft's new Windows Marketplace" is pretty far and removed from what ultimately debuted. Sharp or Motorola were heard to be the potential hardware vendors as of July 1st, along with talk that we'd be seeing a Microsoft branded device, which was a pretty crazy thought at the time given Microsoft's repeated denial and how Windows Mobile's business had been structured historically.

"Turtle" and "Pure" -- which would later be known as Kin One and Kin Two, respectively -- were slider phones unearthed care of 9to5Mac's sources from September 2009. The manufacturer of choice was to be good ol' Hiptop ODM Sharp and the branding shared, i.e. "Microsoft+Sharp." Also on the docket? We had gotten quite an eyeful of Pure and Turtle renders, which later proved to be spot on, and our first inclination that Pink was to be "Microsoft's new phone for regular people... primarily aimed at the same market as the Sidekick."

Aya Dalpati | Nov 22, 2010, 12:10 PM

Smartphones, while growing still aren't the majority of the market. Lots of people want "just a phone". Kids, however, want messaging, but the parents that pay for it probably don't want smart phone fees or for that matter, connection to the internet. There was a story on / just yesterday by a parent asking how to filter his teenage kids access to the internet. It seems like a perfectly valid market that is probably no more niche than smartphones. Not everybody needs or wants a smart phone, and I'm sure there are plenty of people who want a messaging phone. I think the real test will be if it followed good design and they are indeed "very good messaging phones."

Bruno Pontecorvo | Nov 22, 2010, 1:21 PM

Given a choice between an EnV or a Kin, the Kin is an easy choice. If MS were to clean up the multimedia phone space at Verizon, I think you'll suddenly begin to see a new market emerge. Although it's a surprisingly tough market, because I think a lot of it hinges on the data center and carrier integration.

Smartphones, while growing still aren't the majority of the market. Lots of people want "just a phone". Kids, however, want messaging, but the parents that pay for it probably don't want smart phone fees or for that matter, connection to the internet. There was a story on / just yesterday by a parent asking how to filter his teenage kids access to the internet. It seems like a perfectly valid market that is probably no more niche than smartphones. Not everybody needs or wants a smart phone, and I'm sure there are plenty of people who want a messaging phone. I think the real test will be if it followed good design and they are indeed "very good messaging phones."

Windows Phone 7 "Codename Pink" Unveiled

Windows Phone 7 "Codename Pink" Unveiled

A sneak peak at the current Kin One and Two prototype designs. Photo: Microsoft 2009

Kin is Microsoft's third concurrently-supported mobile platform after Windows Phone 7 and Windows Mobile 6.5.3, a result of collaborating with the former developers at Danger, whose Sidekick-centric company was picked up by Microsoft in 2008. It's running an entirely new, touchscreen-centric operating system with a self-proclaimed social media slant. There are three main panes: a list of apps on the left, a list of favorites on the right, and a Motoblur-esque page of updates in the middle, dubbed "The Loop" and prioritized by your favorite people and RSS feeds. The browser is custom -- we're told it's based on the Zune's, but it's nothing to write home about. Speaking of which, there's also full support for Zune music and video, but at this point, no games. Mac users can also take solace in knowing there'll be sideloading software for adding non-DRM'd music to the phone.

Sharing is a big push for Kin, and you can easily send contact information, Bing directions, webpage clippings, and the like to your friends by dragging content to "The Spot," that omnipresent green dot at the bottom of the Kin's screen. All messages, pictures, and video are uploaded automatically to the cloud and accessible via the Kin Studio website.

There are two devices for launch, aptly titled Kin One and Kin Two. Both are sliders with full QWERTY support, with the former leaning towards more one-handed use and the latter with a decidedly larger keyboard. Both are coming to Verizon Wireless in May and Vodafone in the Fall. Prices and data plan fees have yet to be disclosed.

HISTORY

When we first caught wind of Microsoft Kin is largely a matter of perspective. Arguably the fun began in February 2008 when Microsoft bought Danger and placed the Sidekick makers into its own division dubbed the Premium Mobile Experiences (PMX), but looking farther back, rumors of a "Zune phone" go as far back as the Zune itself in 2006 (it was repeatedly denied, of course).

As far as we can tell, the first public reference to Project Pink -- the codename for what would become Kin -- would be just after the acquisition was finalized in May 2008 from Mary Jo Foley and her infamous well-placed sources, then called a "set of consumer-focused 'premium mobile services.'" A Tegra processor was added to the rumor by November and the idea of "an entire software and service platform" with Zune support just a month later. A Mobile World Congress debut (February 2009) was pegged as a possibility, and obviously that didn't happen.

Cut to April 2009, where after a brief absence, Project Pink pops up in the Wall Street Journal. In retrospect, the details weren't quite right -- while the folks in Redmond did end up going with Verizon Wireless as its carrier of choice for Kin (here inferred as only one device), hardware was designed in-house and manufactured by a third party, that part about it being "likely [to] include Microsoft's new Windows Marketplace" is pretty far and removed from what ultimately debuted. Sharp or Motorola were heard to be the potential hardware vendors as of July 1st, along with talk that we'd be seeing a Microsoft branded device, which was a pretty crazy thought at the time given Microsoft's repeated denial and how Windows Mobile's business had been structured historically.

"Turtle" and "Pure" -- which would later be known as Kin One and Kin Two, respectively -- were slider phones unearthed care of 9to5Mac's sources from September 2009. The manufacturer of choice was to be good ol' Hiptop ODM Sharp and the branding shared, i.e. "Microsoft+Sharp." Also on the docket? We had gotten quite an eyeful of Pure and Turtle renders, which later proved to be spot on, and our first inclination that Pink was to be "Microsoft's new phone for regular people... primarily aimed at the same market as the Sidekick."

IE June Security Update Now Available

The [IE Cumulative Security Update](#) for June 2010 is now available via [Windows Update](#). This security update resolves five privately reported vulnerabilities and one publicly disclosed vulnerability in Internet Explorer. The most severe vulnerabilities could allow remote code execution if a user views a specially crafted Web page using Internet Explorer. Users whose accounts are configured to have fewer user rights on the system could be less impacted than users who operate with administrative user rights.

As a reminder, IE security updates are cumulative and contain all previously released updates for each version of Internet Explorer.

I encourage everybody to download this security update and other non-IE security updates via Windows Update or Microsoft Update. Windows users are also strongly encouraged to configure their systems for automatic updates to keep their systems current with the latest updates from Microsoft.

Given a choice between an EnV or a Kin, the Kin is an easy choice. If MS were to clean up the multimedia phone space at Verizon, I think you'll suddenly begin to see a new market emerge. Although it's a surprisingly tough market, because I think a lot of it hinges on the data center and carrier integration.

Microsoft Attending SVG Open 2010 Conference

With Patrick fresh off the plane from Brussels (see previous post), this is a great time to share that Patrick and I will be attending the [SVG Open 2010](#) conference late this summer. The theme of this year's conference is "Ubiquitous SVG." We're excited to help make this theme a reality through our continued participation in the W3C SVG Working Group and the broader developer community and with our implementation of SVG in IE9.

SVG Open 2010, the 8th International Conference on Scalable Vector Graphics, will be held in Paris, France from August 30 – September 1, 2010. A day of optional workshops follows on September 2nd.

[READ MORE »](#)

Getting to SVG 2.0: A report from the SVG Working Group Face-to-Face (May 24th – June 1st 2010)

After months of conference calls, the most recent face to face meeting of the SVG Working Group helped us make progress on this web standard. The biggest 'news' from this meeting was the group's decision to take the next step to finish the current SVG proposal – "SVG 1.1 2nd Edition" – and send it as a [Proposed Recommendation](#) to the W3C Advisory Committee for final endorsement. We also started more serious conversations about SVG 2.0. As the Web has advanced in a lot of areas in and around SVG, one of the most important things we can do as a group is ensure different parts of HTML5 work well together. There are good real life examples of this in SVG Fonts and WOFF that demonstrated the challenge the group discussed and how we move forward to make the web more interoperable in the right way; more on that below.

The Fargo campus reopens at 12 noon Central Time today but with limited services, such as limited reception, dining, and security. For subsequent updates, please dial 1-800-756-0657, option 7.

Index Grid**Organization**

Welcome to MSW's interactive Microsoft organization chart. Click on a person's name below to see 2007 Office system "My Sites." Each My Site profile allows you to see the person in the context of his or her organization, including managers or direct reports. Want the scoop on other executives? Click on "Business Divisions" or "Sales & Operations."

Bill Gates
CHAIRMAN
Responsible for select projects based on direction from CEO Steve Ballmer, along with Ray Ozzie and Craig Mundie.

Steve Ballmer
CHIEF EXECUTIVE OFFICER
Responsible for all product development, marketing, business development, sales, operations, consulting and support, administration, and finance groups within the company.

Craig Mundie
CHIEF RESEARCH & STRATEGY OFFICER
Responsible for the company's research and incubation activities and its intellectual property policy. Oversees the company's technology policy activities.

Ray Ozzie
CHIEF SOFTWARE ARCHITECT
Formulates company's overall technical strategy, ensuring the company is investing in the right technologies and architectures to address market opportunities by identifying and advising on technologies, architectures, and new scenarios.

Eric Rudder
SENIOR VP - TECHNICAL STRATEGY
Works on next-generation operating system technologies.

Robbie Bach
ENTERTAINMENT & DEVICES
Responsible for guiding software, services, and hardware innovation throughout Microsoft's entertainment and mobility platforms and for bringing those solutions to market with retailers and partners.

Stephen Elop
MS BUSINESS DIVISION
Oversees the Information Worker Group, the Microsoft Business Solutions Group, and the Unified Communications Group. These groups develop and deliver business applications, productivity tools, and communication software for small and midsized companies, large organizations, and divisions of global enterprises.

Qi Yu
ONLINE SERVICES
Oversees all company efforts in search, online advertising, and online information and communications services.

Bob Muglia
SERVICES & TOOLS
Responsible for delivering the vision of Dynamic IT—Microsoft's effort to help IT professionals and developers create optimized and agile infrastructures that align to changing business needs.

Workplace Services

Everything you require to meet the needs of your work environment, with specific strategies and policies.

Travel
Plan your next trip with helpful advice on hotels, passports, and transportation. Apply online for a Corporate Card.

IT & Communication
Install software, or obtain remote access. Get troubleshooting tips, or submit an IT service request. Join an e-mail distribution list.

Facilities
Get Microsoft worldwide building information. Book space for an event, or schedule an office move or PC pickup.

Security
Protecting Microsoft's people, data, and property. Find best practices, policies, and awareness.

Purchasing
Review purchasing steps and best practices, including how to open a purchase order, find vendors, or contact Procurement.

Invoicing & Payment
Learn how to get a ProCard, what's required to authorize payments, and how to use MS Invoice and other tools.

Office Services
Get expert help with all of your printing, copying, audio visual, and mailing needs. Contact a receptionist for assistance.

Conference Services
Book a conference room, get the latest on catering policies, or learn about the Conference Room Upgrade Program.

The Environment

Microsoft is committed to developing technologies that help consumers and businesses reduce their environmental footprint, and we will develop these technologies in a way that minimizes the environmental impact of our operations. We also believe in being transparent about the effect of our operations and solutions on the environment. We therefore engage the press on these topics and work with our customers and partners to document how our solutions are driving positive environmental impact.

Submission**SUBMIT A SNAPSHOT**

The MSW homepage Snapshot feature is a showcase for photos depicting Microsoft employees doing cool and interesting things outside of the Microsoft corporate environment.

Please include a brief description of the photo, including the location and subject names as well as the name of the photographer and date the photo was taken.

For editorial purposes, the jpg format is preferred. Originals must be a minimum of 600 x 400 pixels at 72 dpi, as the largest version in the gallery appears at those dimensions. Close-up shots focused on one or more people work best.

Describe Your Snapshot:

SUBMIT A STORY

MSW is the gateway for employees, contractors and vendors seeking knowledge about Microsoft and news that affects the company. We strive to publish features that appeal to our entire audience or the largest segment possible. All content is reviewed to ensure it meets MSW guidelines.

We try to accommodate requests for publishing on specific dates when that's possible. However, given the high volume of requests, we cannot guarantee publishing dates for content submitted less than one week in advance.

Target Audience:
